# Week 01: Draw the Path

Portfolio Sitemap Architecture & Pressure-Test Audit

**Student:** Shahzaib Pervez **Role:** AI/ML Intern @ FlyRank AI **Date:** August 2026

## 1. Portfolio Sitemap Architecture

A minimalist, conversion-focused 4-section sitemap designed to guide ML Hiring Managers from claim to proof to direct action.

**Target Audience: Machine Learning Engineering Leads & Hiring Managers | Primary Action: Book Technical Demo**

### 1. Hero Section (Landing)

**Claim:** "AI/ML Engineer building production search pipelines and reproducible ranking models."
**Call to Action:** Secondary CTA to [View Benchmark Code] and Primary CTA to [Schedule Technical Demo].

### 2. Work & Case Studies (Proof)

**Case Study 1:** Search CTR Learned Model (Beats heuristic baseline by ~3x on live search engagement data).
**Case Study 2:** Interpretable Decision Tree Model (Hyperparameter tuning for explainable search ranking).
**Deliverables:** Embedded Colab Notebook links, execution badges, and GitHub repository source code.

### 3. About & Engineering Stack (Trust)

**Bio:** AI/ML Intern at FlyRank AI focused on practical MLOps and search optimization.
**Technical Stack:** Python, PyTorch, scikit-learn, pandas, Hugging Face, Git/GitHub CI pipelines.

### 4. Contact & Conversion (The Action)

**Primary Conversion:** Embedded Calendly scheduling widget for technical discussions.
**Secondary Channels:** Direct GitHub profile link (Shahzaib-Pervez) and LinkedIn contact button.

## 2. Toolkit Setup & Claude Project Configuration

**[✓] Toolkit Setup:** Accounts active for Claude, ChatGPT, Gemini, and Perplexity.

**[✓] Claude Project Created:** `FlyRank ML Portfolio Build`

**[✓] Tutor Persona:** Custom instructions configured with proof statement and tutor role.

### Saved Project Custom Instructions

```
You are an expert AI/ML Engineering Lead and Portfolio Coach acting as a tutor for Shahzaib
Pervez, an AI/ML Intern at FlyRank AI.

Context & Proof Statement:
- Shahzaib builds readable, high-performance ML pipelines using PyTorch, scikit-learn, and
pandas.
- Proof: Demonstrated a learned model beating hand-written heuristics by 3x on real search
engagement data and optimized interpretable decision tree baselines.
- Target Audience: Engineering Hiring Managers and ML Leads.
```

```
- One Core Action: Drive visitors to schedule a technical demo or review his GitHub repository.

Instruction Persona:
- Act as an incisive, candid technical tutor.
- Eliminate fluff; pressure-test concepts against real engineering hiring standards.
- Guide Shahzaib step-by-step through his 8-week portfolio build.
```

## 3. Sitemap Pressure-Test Prompt & Critique Output

### The Prompt

```
Here is my proposed 4-section portfolio sitemap:
1. Hero Section (Claim: AI/ML Engineer building production search pipelines + CTA)
2. Work / Case Studies (Notebook 01 CTR model vs. rules baseline, Notebook 02 interpretable models)
3. About (FlyRank AI Intern, stack details)
4. Contact (Direct Calendly link / Email / GitHub)

Please pressure-test this sitemap against my target audience (ML Hiring Managers) and my core action (getting them to book a technical demo). Tell me where this map is bloated, what friction exists, and give me 1–2 specific changes I should make.
```

#### Claude Tutor Critique & Analysis

**1. Cold-Friction in Hero CTA:** ML leads rarely click a "Schedule Demo" CTA right away in the Hero section without seeing live code or benchmark metrics first. Placing the primary CTA at the very top creates cold-friction.

**2. Reproducibility Gap:** Notebook 01 and Notebook 02 are strong baselines, but technical recruiters need to see *reproducibility* immediately. Without an inline execution badge (GitHub repo link + Colab badge), they won't convert.

**3. Section Redundancy:** Having a standalone "About" section split from your stack details can dilute focus and add unnecessary scrolling depth.

### Required Refinement / Key Change Made

**Action Taken:** Based on the pressure-test output, I updated the primary Hero CTA to point directly to the *Benchmark Code & Case Studies* section first. The high-commitment "Book Demo" conversion block was relocated to sit immediately below the verified ML metrics, where proof is strongest.

### Submission Instructions

1. Save this PDF as `work/week_01_sitemap_audit.pdf` inside your GitHub repository.
2. Attach a photo/digital drawing of your hand-drawn sitemap sketch in the same folder.
3. Commit and push to GitHub: `git commit -m "docs: complete week 01 sitemap assignment"`
4. Submit your repository URL on the FlyRank card: `https://github.com/Shahzaib-Pervez/flyrank-ml-internship`
