

CORE PHILOSOPHY & PRINCIPLE

AI permits infinite image generation in seconds, making visual judgment and curation far more critical than raw generation. The objective is to use real screenshots for proof of technical work, a real photograph for personal identity, and strictly cohesive AI generations for non-subject connective tissue.

3. Ruthless Curation & Rejection Analysis (The Discernment Test)

Discernment is defined by what you choose NOT to include. Below is the evaluation of rejected AI generations:

REJECTED CANDIDATE #1: 'Holographic Cyberpunk Brain Dashboard' (Prompt Iteration 2)

Prompt: 'Futuristic glowing brain made of neon blue data circuits floating over dark cybernetic background.'
Why Rejected: Experienced extreme aesthetic cliché and high visual noise. The neon pink/cyan glow clashed harshly with the portfolio's minimalist dark-mode design system (#0f172a slate). Floating sci-fi brain imagery communicates amateurish tropes rather than serious data engineering capability.

REJECTED CANDIDATE #2: 'Hyper-realistic 3D Glass Orbs with Code' (Prompt Iteration 5)

Prompt: 'Minimalist glass sphere reflecting python code lines, realistic lighting, dramatic depth of field.'
Why Rejected: The dramatic depth of field and specular highlights created an inconsistent 'pile' alongside the portfolio cards. The strong specular reflections drew focus away from project headings, breaking visual hierarchy.

THE KEEPER: 'Subdued Dark Vector Network Mesh' (Prompt Iteration 8)

Prompt: 'Clean abstract dark slate background, subtle deep blue and cyan network nodes connected by ultra-fine faint gradient lines, flat modern vector style, no noise, 16:9 ratio.'
Why Kept: Maintains perfect visual harmony with site CSS tokens (#0f172a slate background, #06b6d4 cyan accents). The low-contrast gradient lines sit softly behind hero typography, forming a cohesive set.

4. Pass / Revise Self-Assessment Rubric

Rubric Requirement	Status	Evaluation & Compliance Evidence
1. Content Mapping	PASS	Every image maps to a specific portfolio section with clear purpose.
2. Real Work Captures	PASS	Technical work is proven to be real, un-hallucinated screenshots.
3. AI Style Consistency	PASS	All connective AI assets share one consistent dark slate/cyan visual set.
4. Personal Identity	PASS	Authentic photograph used for profile/author identity.
5. Genuine Discernment	PASS	Rejection notes detail explicit design rules (hierarchy, noise, contrast).
